**Proceedings publisher and organizer of the conference:**

University "St. Kliment Ohridski", Bitola, Faculty of Information and Communication Technology – Bitola, Republic of North Macedonia

**For publisher:**

Blagoj Ristevski, PhD, Full Professor, Dean of the  
Faculty of Information and Communication Technologies,  
University "St. Kliment Ohridski", Bitola, North Macedonia

**Proceedings editors:**

Kostandina Veljanovska, PhD  
Željko Stojanov, PhD

**Conference Chairmans:**

Blagoj Ristevski, University "St. Kliment Ohridski", Faculty of Information and Communication Technologies, Bitola, Republic of N. Macedonia – chair

Kostandina Veljanovska, University "St. Kliment Ohridski", Faculty of Information and Communication Technologies, Bitola, Republic of N. Macedonia – co-chair

Željko Stojanov, University of Novi Sad, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia – co-chair

**Technical preparation of the proceedings:**

Kostandina Veljanovska, PhD  
Marija Apostoloska Kondoska, MSc  
Darko Pajkovski, MSc

**Cover design:**

Kostandina Veljanovska, PhD  
Hristina Dimova Popovska, MSc

## **Introduction**

As organizing partners of 15th International Conference on Applied Internet and Information Technologies AIIT 2025, we warmly welcome all participants, researchers, and colleagues joining us from various countries and universities, united by our shared commitment to advancing knowledge in the fields of computer science, applied Internet, and information technologies.

The AIIT conference has become a long-standing tradition of excellence and collaboration, co-organized by the Faculty of Information and Communication Technologies – Bitola, University “St. Kliment Ohridski,” and the Technical Faculty “Mihajlo Pupin” – Zrenjanin, University of Novi Sad, Serbia. Over the past fifteen years, this partnership has fostered not only strong academic cooperation but also genuine friendship among our institutions and scholars.

This year’s conference proudly continues that tradition, bringing together innovative research, diverse perspectives, and new insights into technologies that are shaping our digital future. The Scientific Program Committee once again faced the demanding task of selecting the highest-quality papers from more than sixty submissions spanning a wide range of topics—including Artificial Intelligence, Immersive Technologies, Mathematical Simulations, Data Science and Big Data Analytics, Knowledge and IT Management, Cybersecurity, Software Engineering, Data Mining, Digital Transformation, Behavioral Economics and Business, Social Engineering, Digital Humanities, Augmented Humanity, and Hybrid Intelligence. This ensures that the program reflects both scientific rigor and creative originality.

We would like to express our sincere gratitude to all reviewers for their dedicated work, as well as to the members of the Organizing Committee for their professionalism, commitment, and enthusiasm in preparing this event.

We are confident that these proceedings will provide an enriching and thought-provoking reading experience.

## **Conference chairs:**

Blagoj Ristevski, University “St. Kliment Ohridski”, Faculty of Information and Communication Technologies, Bitola, Republic of N. Macedonia (chair)

Kostandina Veljanovska, University “St. Kliment Ohridski”, Faculty of Information and Communication Technologies, Bitola, Republic of N. Macedonia (co - chair)

Željko Stojanov, University of Novi Sad, Technical faculty “Mihajlo Pupin”, Zrenjanin, Serbia (co – chair)

**MAIN ORGANIZERS:**

Faculty of Information and Communication Technologies - Bitola  
University "St. Kliment Ohridski" University - Bitola  
NORTH MACEDONIA

## Conference Chairs

**Blagoj Ristevski, University "St. Kliment Ohridski", Faculty of Information and Communication Technologies, Bitola, Republic of N. Macedonia (chair)**

Prof. Dr. Blagoj Ristevski is a Full Professor at the Faculty of Information and Communication Technologies (FICT) at the University "St. Kliment Ohridski" - Bitola, where he currently serves as Dean. He holds a PhD in Technical Sciences from the Faculty of Electrical Engineering and Information Technologies, Institute of Computer Science and Informatics, at Ss. Cyril and Methodius University in Skopje. His research interests span Databases, Data Science, Data Mining, Big Data Analytics, Bioinformatics, Computer Graphics, and Cybersecurity. Prof. Ristevski has supervised numerous BSc, MSc, and PhD theses and has led several international research projects. He has served on the management committees of multiple COST actions, reviewed for numerous high-impact journals, and evaluated project proposals for the Horizon 2020 and Horizon Europe programs. Prof. Ristevski is also a senior member of IEEE.

**Kostandina Veljanovska, University "St. Kliment Ohridski", Faculty of Information and Communication Technologies, Bitola, Republic of N. Macedonia (co – chair)**

**Kostandina Veljanovska, Ph.D.** completed her education at the University "Sts. Kiril i Metodii", Skopje (BSc in Computer Science), at the University of Toronto, Toronto (MSc in Applied Engineering) and got her MSc and also her PhD in Technical Sciences at the University "St. Kliment Ohridski", Bitola, R. Macedonia. She has completed postdoc in Artificial Intelligence at the Laboratory of Informatics, Robotics and Microelectronics at the University of Montpellier, Montpellier, France. She worked as a Research assistant at the Faculty of Applied Science, University of Toronto, Canada. She also, worked at research team for Constraints, Learning and Agents at LIRMM, University of Montpellier. Currently, she works as a Full Professor in Artificial Intelligence and Systems, Computer Science and Computer Engineering at the Faculty of Information and Communication Technologies, University "St. Kliment Ohridski" - Bitola and serves as a Vice-dean for Science and Collaboration. Her research work is focused on artificial intelligence, machine learning techniques, intelligent systems and human - computer interaction. She participated in several international and domestic scientific projects. She has published numerous scientific papers in the area of interest, as well as several monographic items. She is a reviewing referee for well-known publishing house, journals with significant impact factor in science and also, member of editorial board of several international conferences.

**Željko Stojanov, University of Novi Sad, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia (co – chair)**

**Željko Stojanov, Ph.D.** received PhD degree in Computer science and applied informatics at University of Novi Sad, Serbia. He works as a full professor at University of Novi Sad, Technical Faculty "Mihajlo Pupin" Zrenjanin, Serbia. His research interests are in the fields of software engineering, software architecture, software life cycle, business informatics, learning and knowledge management, engineering education, and human aspects of software engineering. He is author of scientific papers published in refereed journals and in the proceedings of international conferences. He participated in several research and industrial projects at national and international levels. He has over fifteen years of experience working with small software companies as a consultant in the fields of software development, software maintenance and software process improvement.

## Organizing Committee

### Chairs

Kostandina Veljanovska (President), Faculty of Information and Communication Technologies - Bitola, N. Macedonia

Željko Stojanov, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia (vice-president)

### Members

Blagoj Ristevski, Faculty of Information and Communication Technologies - Bitola, N. Macedonia

Ivana Berković, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Višnja Ognjenović, Technical Faculty "Mihajlo Pupin" Zrenjanin, Serbia

Eleonora Brtko, Technical Faculty "Mihajlo Pupin" Zrenjanin, Serbia

Dalibor Dobrilovic, Technical Faculty "Mihajlo Pupin" Zrenjanin, Serbia

Dragica Radosav, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Biljana Radulovic, Technical Faculty "Mihajlo Pupin" Zrenjanin, Serbia

Božidar Milenkovski, Faculty of Information and Communication Technologies - Bitola, N. Macedonia

Ljubica Kazi, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Snežana Savoska, Faculty of Information and Communication Technologies - Bitola, N. Macedonia

Vladimir Brtko, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Zoltan Kazi, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Siniša Mihajlović, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Velibor Premčevski, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Nikola Rendeovski, Faculty of Information and Communication Technologies - Bitola, N. Macedonia

Aleksandra Stojkov, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Maja Gaborov, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Milica Mazalica, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Igor Vecštejn, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Marko Blažić, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Vuk Amižić, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Natasa Blazeska-Tabakovska, Faculty of Information and Communication Technologies - Bitola, N. Macedonia

Jovana Borovina, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Dalibor Šeljmeši, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Mimoza Bogdanoska Jovanovska, Faculty of Information and Communication Technologies - Bitola, N. Macedonia

Vladimir Šinik, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Nadežda Ljubojev, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Marina Blažeković Toshevski, Faculty of Information and Communication Technologies - Bitola, N. Macedonia

Hristina Dimova Popovska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski" - Bitola, N. Macedonia

Darko Pajkovski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski" - Bitola, N. Macedonia

Marija Apostoloska Kondoska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski" - Bitola, N. Macedonia

Milcho Prisagjanec, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski" - Bitola, N. Macedonia

Ilche Dimovski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski" - Bitola, N. Macedonia

Zoran Pavlovski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski" - Bitola, N. Macedonia

Vladimir Karuović, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia

Evgeny Cherkashin, Institute of System Dynamic and Control Theory SB RAS, Russia

Anastasia Popova, Matrosov Institute for System Dynamics and Control Theory of the Siberian Branch of the Russian Academy of Sciences, Russia

Filip Tsvetanov, South-west University "Neophyte Rilsky", Faculty of Engineering, Blagoevgrad, Bulgaria

## Program Committee

Blagoj Ristevski (president), Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia,  
Željko Stojanov, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia (vice-president)  
Kostandina Veljanovska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia (vice-president)  
Eleonora Brtko, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Višnja Ognjenović, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Dalibor Dobrolović, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Ljubica Kazi, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Dragica Radosav, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Dragana Glušac, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Borislav Odadžić, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Miodrag Ivković, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Biljana Radulović, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Ivana Berković, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Vladimir Brtko, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Zoltan Kazi, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Jelena Stojanov, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Vesna Makitan, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Nadežda Ljubojev, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Vladimir Šinik, Technical faculty "Mihajlo Pupin", Zrenjanin, Serbia  
Igor Nedelkovski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Aleksandar Markoski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Violeta Manevska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Pece Mitrevski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Ilija Jolevski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Dragan Grueski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Monika Markovska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Snežana Savoska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Sonja Mančevska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Mimoza Bogdanoska Jovanovska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Nataša Blažeska Tabakovska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Božidar Milenkovski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Zoran Kotevski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia  
Nikola Rendeovski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski",

Bitola, North Macedonia

Andrijana Bocevska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia

Tome Dimovski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia

Marina Blažeković Toševski, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia

Lela Ivanovska, Faculty of Information and Communication Technologies, University "St. Kliment Ohridski", Bitola, North Macedonia

Ilija Hristoski, Faculty of Economics - Prilep, North Macedonia

Elena Vlahu-Gjorgievska, University of Wollongong, Australia

Mimoza Mijoska, International Slavic University GAVRILA ROMANOVICH DERZHAVIN, Faculty of Technical Sciences and Informatics

Blagoj Nenovski, University "St. Kliment Ohridski", Bitola, North Macedonia

Nora Pireci Sejdiu, University "St. Kliment Ohridski", Bitola, North Macedonia

Saso Nikolovski, AUE University, Faculty of Informatics-Skopje, North Macedonia

Aybeyan Selim, International Vision University, Gostivar, North Macedonia

İlker Ali, International Vision University, Gostivar, North Macedonia

Fehmi Skender, International Vision University, Gostivar, North Macedonia

Ming Chen, Zhejiang University, China

Alexander Feoktistov, Matrosov Institute for System Dynamics and Control Theory of the Siberian Branch of the Russian Academy of Sciences, Irkutsk, Russia

Alexander Yurin, Matrosov Institute for System Dynamics and Control Theory of the Siberian Branch of the Russian Academy of Sciences, Irkutsk, Russia

Igor Bychkov, Matrosov Institute for System Dynamics and Control Theory of the Siberian Branch of the Russian Academy of Sciences, Irkutsk, Russia

Andrey Gachenko, Matrosov Institute for System Dynamics and Control Theory of the Siberian Branch of the Russian Academy of Sciences. Irkutsk, Russia

## Abstract:

The rapid advance of artificial intelligence (AI) and machine learning (ML) has triggered discussions on the role of humans in a technology-dominated world. The concept of Digital Humanism has emerged as a framework for aligning digital transformation with human-centered values and ethical imperatives. Alongside the concept of Augmented Humanity, the enhancement of human abilities through AI calls for a redefinition of human-machine interaction. This paper explores the intersection of these two domains by analyzing how Digital Humanism can guide the design and governance of AI systems that empower rather than replace humans. Considering recent research in AI ethics, intelligence augmentation, and digital humanities, this study proposes a conceptual framework for responsible AI-driven augmentation. It reflects on its implications for society, culture, and future interdisciplinary and transdisciplinary research in computer science, computer engineering, and the humanities.

## Keywords:

Digital Humanism, Augmented Humanity, AI Ethics, Human-Centered Design, Technological Humanism, Hybrid Intelligence.

## 1. Introduction

The integration of AI into social, economic, and cultural systems has fundamentally redefined the meaning of a human in the digital era. The technology nowadays facilitates decision-making, communication, and creativity, influencing how individuals perceive activity and autonomy. While these technologies promise unprecedented efficiency and insight, they also raise profound concerns about algorithmic bias, dehumanization, and the systematic shrinkage of privacy.

**Digital Humanism** emerges as a corrective model in this landscape. It emphasizes the critical need to design, deploy, and regulate technology according to human values, fundamental human rights, and democratic principles. In parallel, **Augmented Humanity** and **Intelligence Augmentation** shift the focus from replacing humans to amplifying human cognition and creativity. In that context, **Hybrid Intelligence** integrates the cognitive capabilities of humans, such as emotional insight, contextual understanding, and ethical reasoning, with the computational power, data processing efficiency, and pattern recognition capabilities of AI, to significantly enhance collaborative decision-making, creativity, and innovative problem-solving.

This paper contends that Digital Humanism provides the ethical and epistemological foundation for AI-driven augmentation, prioritizing human dignity and social justice in technological advancement.

The remainder of the paper is structured as follows. Conceptual fundamentals: Digital Humanism, Augmented Humanity, and AI Ethics are presented in Section 2. The subsequent Section describes intersections between Digital Humanism and Augmented Humanity. A framework for human-centered augmentation is depicted in Section 4. Section 5 highlights the implications and challenges of the role of digital humanism in shaping AI-driven augmented humanity. The last Section concludes the paper by giving recommendations for future work.

## 2. Conceptual Fundamentals

Understanding the intersection of Digital Humanism and Augmented Humanity requires clarity on three foundational concepts, together with AI Ethics, that form the theoretical backbone of this study. These concepts represent distinct but interrelated approaches to reimagining the relationship between humans and technology.

**Digital Humanism** is an intellectual movement and practical approach to technological development grounded in the belief that humans must remain active agents in shaping digital transformation. The Vienna Manifesto on Digital Humanism has called for interdisciplinary collaboration to ensure that technological systems strengthen human autonomy, equality, and sustainability [1] [2] [15]. Humans must shape technologies in accordance with human values and needs, instead of allowing technologies to shape them. Moreover, a new vision is required for educational curricula development that integrates knowledge from the humanities, social sciences, and engineering [1]. Digital humanism is an ethical framework for the digital age that seeks to interpret and shape the processes of digital transformation in accordance with the fundamental concepts of humanist philosophy and practice [15]. It emphasizes that human beings should remain at the center of the digital world, with technological development aimed at enhancing human freedom, peace, and progress in harmony with nature, providing societal progress [2].

**Augmented Humanity** focuses on extending human potential through the symbiotic interaction of biological and digital systems. In contrast to automation, which endeavors to replace human labor, augmentation aspires to be a partner - AI as a collaborator rather than a competitor. This human-computer integration aims to enhance productivity and capacity by augmenting human capabilities through the extension or restoration of physical, intellectual, and social functions [3].

**AI Ethics** integrates philosophical exploration and technical implementation, concerning fairness, explainability, and harm prevention. Digital Humanism integrates the principles mentioned above within a human-centered design methodology by developing systems that adapt to human contexts [6] [10]. A framework is proposed that enables developers and policymakers to better comprehend the ethical implications of digital technologies before they are widely implemented, aiming to reduce risks and promote positive outcomes. This framework supports a balanced approach to digital innovation, ensuring that technological advancement aligns with universal human values and ethical principles, so the digital world continues to serve human well-being [6].

### 3. Intersections between Digital Humanism and Augmented Humanity

The convergence of Digital Humanism and Augmented Humanity creates a powerful framework for understanding how AI can enhance rather than diminish human potential. This intersection reveals three critical areas of synergy: ethical anchoring, collaborative intelligence, and cultural preservation.

Harfouche et al. [5] demonstrate how human-centric AI can mitigate algorithmic biases, introducing the concept of “augmented intelligence” as a corrective to purely autonomous systems. The synergy between Digital Humanities as an academic discipline and Hybrid Intelligence as a research paradigm with specific requirements and constraints is explored in [14]. Considering the gap between academic and managerial approaches towards integrating human knowledge with the use of AI tools, a new AI approach through the design science research methodology is developed [5]. Ciula and Eide [8], along with Hawkins [9], explore how digital humanities methods sustain human interpretation while leveraging computational techniques in the study of cultural heritage [12]. The datafication of digitised archives offers digital humanists new opportunities to engage with vast quantities of archival material [9].

The distinction between automation and augmentation represents more than a semantic difference. It reflects a fundamental reimagining of how humans and technology coexist and interact.

Guerrero et al. [3] provide a systematic mapping review of Augmented Humanity, identifying key application domains and limitations, and demonstrating how augmentation technologies extend rather than replace human capabilities. Figure 1 illustrates the paradigm shift from traditional automation (replacement pattern, efficiency-driven) to intelligence augmentation (collaboration pattern, creativity-driven) and augmented humanity (symbiosis pattern, flourishing-driven).

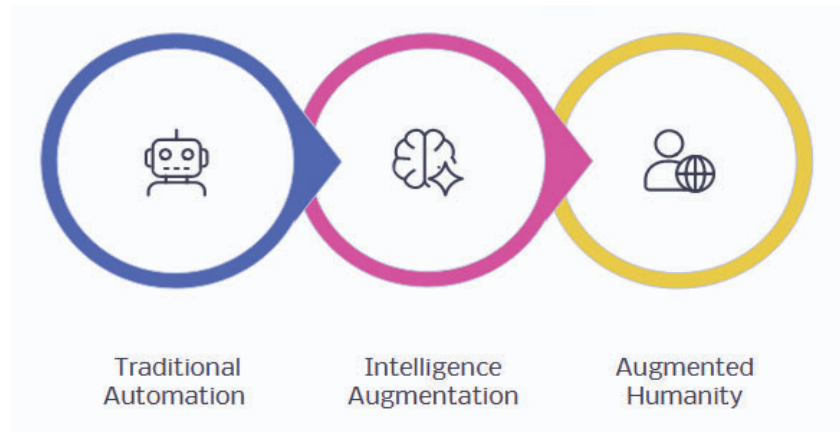

Figure 1: The paradigm shift from traditional automation (replacement paradigm, efficiency-driven) to intelligence augmentation (collaboration paradigm, creativity-driven) and augmented humanity (symbiosis paradigm, flourishing-driven).

#### 4. A Framework for Human-Centered Augmentation

To operationalize the synergy between Digital Humanism and Augmented Humanity, this paper proposes a comprehensive four-layer conceptual framework. Each layer addresses distinct but interconnected dimensions of responsible AI-driven augmentation.

Figure 2 depicts the framework consists of the following 4 layers:

- **Ethical Foundation Layer.** It establishes essential principles: autonomy, fairness, inclusivity, and sustainability. This layer ensures that all augmentation technologies respect human dignity and fundamental rights.
- **Cognitive Collaboration Layer.** It enables shared reasoning between humans and artificial intelligence. Systems at this layer are designed to enhance rather than replace human judgment and creativity.
- **Inclusive Design Layer,** that prioritizes accessibility, transparency, and adaptability. This layer ensures that augmentation technologies to adapt effectively across diverse populations and settings.
- **Societal Feedback Loop,** which implements participatory governance mechanisms. This layer creates channels for ongoing public input, evaluation, and democratic oversight of augmentation systems.

This framework draws on insights from Díaz de la Cruz et al. [6] and Hofkirchner and Kreowski [10].

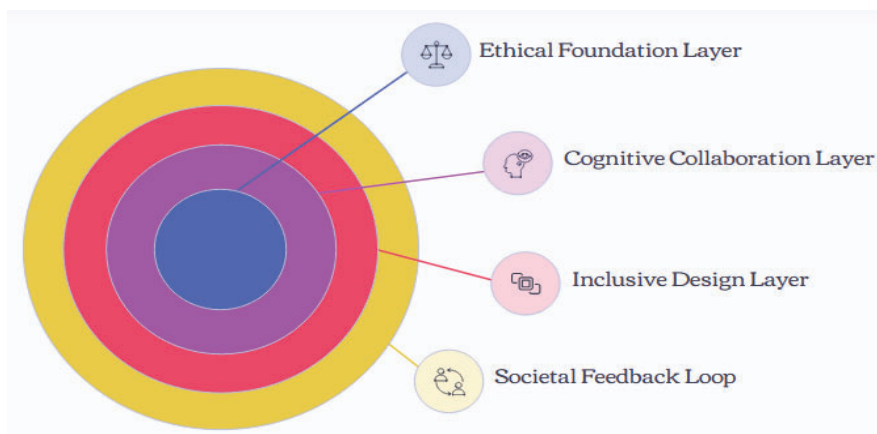

Figure 2: The framework: Ethical Foundation Layer, Cognitive Collaboration Layer, Inclusive Design Layer, Societal Feedback Loop.

## 5. Discussion

One of the most pressing challenges in AI systems is the perpetuation and amplification of social biases. Harfouche et al. [5] demonstrate that human-centric AI offers a pathway to mitigate these biases through Augmented Intelligence approaches that maintain human oversight and judgment. Sapignoli [13] critiques the “AI turn” in global governance, arguing that big data systems often produce a “mismeasure of the human.” Algorithmically mediated knowledge and power are becoming increasingly significant in defining areas of human rights concern and methods for addressing them, as machine learning promises to uncover previously hidden patterns in human interaction, with huge amounts of information forming the ground for further analysis and interpretation [13].

Table 1 provides a comparative analysis of three augmentation approaches: traditional automation, Intelligence Augmentation, and Digital Humanist augmentation, across multiple dimensions, including their primary goals, the role of humans, value orientation, decision-making authority, ethical frameworks, design processes, and success metrics.

The impact of AI on labor markets represents a consequential domain. Paul et al. [4] and Zhou et al. [7] emphasize design principles that prioritize human factors. Ethical issues connected to human-computer interaction and Augmented Intelligence, which are crucial in shaping the future of human work, are considered in [4]. Besides finding good manners to use intelligence augmentation, appropriate socio-technical interaction metrics are required to measure its positive impact on humanity [7].

Despite its promise, operationalizing Digital Humanism faces challenges, including governance complexity, cultural bias, educational gaps, market pressures, technical limitations, as well as barriers during implementation. These challenges are synthesized in Table 2. Overcoming them necessitates ongoing, interdisciplinary dialogue and cooperation.

**Table 1:**  
Comparative analysis of augmentation approaches

Dimension	Traditional Automation	Intelligence Augmentation	Digital Humanist Augmentation
Primary Goal	Efficiency and cost reduction	Capability enhancement	Human flourishing and empowerment
Human Role	Passive recipient or displaced worker	Active user of tools	Co-designer and partner
Value Orientation	Economic optimization	Individual productivity	Collective well-being and justice
Decision Authority	Algorithmic determination	Human-in-the-loop	Human-in-the-loop with participatory governance
Ethical Framework	Compliance-based	Risk mitigation	Rights-based and values-driven
Design Process	Technology-first	User-centered	Human-centered and democratically governed
Success Metrics	ROI (Return on Investment) and throughput	Task performance	Human agency, equity, and sustainability

**Table 2:**

Challenges in operationalizing Digital Humanism

Challenge Category	Specific Issues	Potential Responses
<b>Governance Complexity</b>	Coordinating stakeholders across sectors, jurisdictions, and cultures Balancing innovation with regulation	Multi-stakeholder forums Adaptive governance frameworks International cooperation mechanisms
<b>Cultural Bias</b>	Dominant-culture framing of "universal" values Insufficient representation of diverse epistemologies	Participatory design with marginalized communities Pluralistic value frameworks Decolonial approaches
<b>Educational Gaps</b>	Limited digital literacy Lack of interdisciplinary training Inadequate ethical formation	Curriculum reform Lifelong learning initiatives Ethics integration across disciplines
<b>Market Pressures</b>	Short-term profit motives Competitive dynamics favoring speed over safety Concentration of power	Regulatory incentives Public interest technology Alternative business models
<b>Technical Limitations</b>	Explainability challenges Scalability of oversight Measurement of human-centric outcomes	Advancing interpretable AI Human-in-the-loop systems Qualitative evaluation methods
<b>Implementation Barriers</b>	Resource constraints Organizational inertia Lack of standardized frameworks	Open-source tools; capacity building Shared best practices repositories

## 6. Conclusion and Directions for Future Work and Research

De Boer et al. [14] and Mozumder et al. [11] highlight opportunities and challenges in emerging technologies and future trends of the Metaverse. The convergence of Digital Humanism and AI-driven Augmented Humanity indicates a paradigm shift from tool-centered to value-centered design of digital systems, technologies, and human-machine interactions. This synthesis gives rise to **Technological Humanism**: a framework where innovation enhances empathy, creativity, and collective intelligence. Future research should include: (1) empirical validation of the framework; (2) cross-cultural perspectives; (3) governance mechanisms; (4) measurement instruments; and (5) educational interventions. As Werthner et al. emphasize, the future is actively created through deliberate choices [15].

Further study has to rigorously test the proposed framework across diverse contexts and applications. Longitudinal studies examining real-world implementations will provide crucial insights into the effectiveness and unintended consequences of human-centered augmentation approaches. Moreover, expanding beyond Western perspectives to include diverse epistemologies and global value systems remains crucial for a more inclusive understanding. This includes engaging indigenous knowledge systems and non-Western philosophical traditions in shaping AI development. Developing adaptive, participatory governance structures that can evolve alongside emerging technologies while ensuring democratic accountability. This includes exploring novel forms of public engagement and oversight.

Designing curricula and training programs that provide current and future practitioners with the interdisciplinary knowledge and ethical sensibilities required for implementing Digital Humanism principles, and creating robust metrics and evaluation frameworks that capture human-centric outcomes beyond traditional efficiency measures, are still challenging tasks. This includes developing qualitative and mixed-methods approaches to assessment.

This paper has explored the critical intersection of Digital Humanism and AI-driven Augmented Humanity, proposing a comprehensive framework for ensuring that technological advancement serves

human prosperity rather than diminishing it. The four-layer framework, spanning ethical foundations, cognitive collaboration, inclusive design, and societal feedback, provides a roadmap for responsible augmentation.

The comparative analysis reveals fundamental differences between automation, augmentation, and humanist approaches, demonstrating that achieving truly human-centered AI requires paradigm shifts in values, governance, and design philosophy. Finally, the convergence of Digital Humanism and Augmented Humanity offers a vision of technological development that enhances rather than replaces human actions, creativity, and dignity, considering AI-driven augmentation. This perception requires ongoing commitment from all stakeholders (researchers, practitioners, policymakers, and citizens) to respond effectively to rapid technological and societal changes, actively shape and move toward Technological Humanism.
